***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-35, drawn to a solid oxide regenerative fuel cell, classified in class 429, subclass 12.
  - II. Claim 36-48, drawn to a method of operating a solid oxide regenerative fuel cell, classified in class 429, subclass 13.

The inventions are distinct, each from the other because of the following reason.

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process (MPEP § 806.05(e)). As admitted in the subject matter of the present claims, the method of operating a solid oxide regenerative fuel cell can be used to practice by three materially different solid oxide fuel cells as recited in claims 1-18, 19-27 and 28-25, respectively.

3. If invention I is elected, an election of species is required. This application contains claims directed to the following patentably distinct species of the claimed invention:

I-1, Claims 1-18, drawn to a solid oxide regenerative fuel cell comprising a ceramic electrolyte, a first electrode, and a second electrode.

I-2, Claims 19-27, drawn to a solid oxide regenerative fuel cell comprising a first electrode, a second electrode and a first means for conducting oxygen ions from the first electrode to the second electrode.

I-3, Claims 28-35, drawn to a solid oxide regenerative fuel cell comprising a first electrode, a second electrode, a first means for conducting oxygen ions from the first electrode to the second electrode and a second means for providing a sufficient reducing atmosphere to the second electrode.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

4. Applicant is advised that a reply to this requirement must include an identification of the invention/species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
